Prologue

Dear Reader,

The School of Environmental Engineering (ENVENG) at the Technical University of Crete has been operating since academic year 1997-1998. Over the past 20 years, the School has awarded 647 Diplomas in Environmental Engineering, 418 Master degrees (M.Sc.) and 67 Doctoral degrees (Ph.D.).

The School’s faculty with rich experience in research and teaching at Universities and Institutes abroad (USA, Canada and Europe) provides quality education to our students. Innovative and high quality research activity is conducted at the School in the fields of environmental management, quality assurance and restoration. The high quality scientific publications and the participation in research programs at national and European level evince the international recognition of the School.

The School aims to train engineers in the areas of environmental management, environmental processes and development planning, environmental hydraulics and geoenvironmental engineering. This is accomplished through the undergraduate program that includes courses designed for students to acquire high-quality, high-level theoretical background and laboratory experience.

Our students, with the contribution of the faculty, learn how to remedy mistakes of the past, to avoid creating or aggravating current environmental problems and to design development pathways to a better future with respect for man and the environment, all in a sustainable development framework.

The School’s graduates are members of the Technical Chamber of Greece (TEE), enlisted as civil engineers or chemical engineers based on their diploma thesis subject. Our graduates work in universities and research centers in Greece and abroad, industry, public services and as professional engineers.

On behalf of our School’s faculty and staff, I warmly welcome and invite you for a tour through our website (www.enveng.tuc.gr).

Sincerely,

Professor Mihalis Lazaridis

Dean of the School

The Technical University of Crete (TUC) was founded in Chania in 1977 and admitted its first students in 1984. Since its foundation, the Technical University of Crete is at the forefront in the development of modern engineering skills and specializations, as well as in the research for advanced technologies and their connection with the industrial and productive units of the country. The Technical University of Crete consists of five engineering Schools all of which offer postgraduate programs of studies. The Schools are listed below in chronological order of operation:

- School of Production Engineering & Management
- School of Mineral Resources Engineering
- School of Electronic and Computer Engineering
- School of Environmental Engineering
- School of Architecture

The campus is built on a panoramic location at Akrotiri, 7 km northeast of the city of Chania, and occupies an area of 300 hectares. The institution owns several traditional and historical buildings in the city, such as the former French School, which has been converted to a conference center.

The University Library is housed in two buildings (E1 and Δ1).

The University Hall of Residences accommodates students in single rooms. The University restaurant serves the University community at low cost. The Ministry of Education provides free accommodation and catering to undergraduate and graduate students with low income. For more information, interested students should contact the Department of Student Affairs.
2 The School of Environmental Engineering (ENVENG)

2.1 General information

The Department of Environmental Engineering was established at the Technical University of Crete (P.D. 232/1995, O.G. 134/22-6-1995/vol. A’) and admitted its first students in Academic Year 1997-1998. The School of Environmental Engineering, which incorporated the former Department (O.G. 119/28-5-2013/vol. A’), was established in May 2013.

2.2 Objectives

The objectives of the School of the Environmental Engineering are to provide advanced education of a high standard in environmental science and engineering and to prepare qualified engineers to measure, monitor, assess, and treat of problems caused by human intervention in the environment.

The programs of study provide scientific expertise in the following areas:

- design, construction and operation of
  - wastewater treatment plants,
  - air pollutant emissions control systems,
  - solid waste management and treatment units,
  - agricultural and food industry waste treatment units
  - toxic and hazardous waste management and treatment units
- air pollution management,
- surface and subsurface water management,
- measurement systems for air, soil and water pollution,
- soil and ground water remediation,
- environmental impact and risk assessment,
- noise and radiation control,
- renewable energy sources and energy conservation systems.

2.3 Mission of the School of Environmental Engineering

The Mission of the School of Environmental Engineering is to:
- offer courses at the undergraduate and graduate level,
- advance multidisciplinary research on environmental issues, and,
- provide environmental services to the society and the scientific community.

Objectives of the Undergraduate Program

The objective of the Undergraduate Program (UP) of the School of Environmental Engineering is to provide future Professional Environmental Engineers with advanced technical and communication skills, in combination with up-to-date knowledge of global environmental issues, so that they may assume leading positions in environmental management.

Educational Objectives of the Undergraduate Program

In particular, the educational objectives of the UP are:
- To offer courses related to environmental engineering science, data analysis and system design.
- To help students develop basic skills such as the ability for synthesis, integrated systems logic, experimentation and cooperation.
- To incorporate social, economic, and cultural issues into the educational program aiming at optimal problem solving.
2.4 Environmental Engineering – The profession

The Environmental Engineering profession has matured over the years. Curriculum requirements provide engineering students with the thorough background, necessary to assume leading positions in either the private or public sector and to cooperate with other engineers and scientists.

The main activities of the Environmental Engineer are: the design and implementation of programs for the protection, development and general management of the Environment, the preparation or management of projects regarding natural or man-made environmental systems, as well as the study of the environmental impacts of technical works or other activities based on the legislation in force.

Employment opportunities for Environmental Engineers can be found in both the public and private sector, either as individual freelancers or in cooperation with engineers in other disciplines, as well as in educational institutions teaching courses on environmental subjects.

In today’s world, characterized by an everlasting desire for technological progress, the skills and expertise of Environmental Engineers will always be in high demand in Greece and worldwide.
2.5 Administration

The School is managed by the General Assembly (GA) and the Dean, who chairs the GA. The responsibilities of the GA are determined by the current Higher Education Framework Law and its amendments.

Dean

Professor Mihalis Lazaridis is the Dean of the Environmental Engineering School. Professor George Karatzas serves as deputy dean.

Deanery of the School

Members of the Deanery are:

- Professor George Karatzas
- Associate Professor Efpraxia (Aithra) Maria
- Assistant Professor Nikolaos Paranychianakis
- Professor Elia Psillakis
- Professor Ioannis Yentekakis

Secretary

Mrs. Gina Poniridou is Secretary, tenured employee, (B.A. in Management/Economics) graduate of Panteion University of Social and Political Sciences.

School’s Committees and Representation in TUC Committees

By decision of the GA of the Environmental School the following are appointed committee members:

1. Undergraduate Studies Committee

   - N. Kalogerakis, Professor (co-ordinator)
   - A. Manousakis, Associate Professor
   - N. Paranychianakis, Assistant Professor
   - I. Yentekakis, Professor
   - (One student representing the Undergraduate Students’ Association)

   A.1 Special Advising Committee for the New Undergraduate Program of Studies

   o N. Kalogerakis, Professor
   o A. Manousakis, Associate Professor
   o N. Paranychianakis, Assistant Professor

2. Postgraduate Studies Steering Committee

   - E. Psillakis, Professor (Coordinator – Head of Postgraduate Studies)
   - M. Lazaridis, Professor
   - I. Tsanis, Professor
• N. Nikolaidis, Professor
• C. Chrysikopoulos, Professor

3. Advising Committee for Undergraduate Students
• I. Yentekakis, Professor
• G. Karatzas, Professor
• D. Kolokotsa, Associate Professor
• E. Maria, Associate Professor
• N. Xekoukolotakis, Assistant Professor

4. Internship
• D. Venieri, Assistant Professor

5. EnvEng ERASMUS+
• N. Xekoukolotakis, Assistant Professor

6. TUC Library Committee (EnvEng representative)
• N. Xekoukolotakis, Assistant Professor

7. EnvEng Energy Committee
• D. Kolokotsa, Associate Professor
• T. Tsoutsos, Professor

8. EnvEng Health and Safety Committee
• E. Psillakis, Professor
• E. Koukouraki, LTS
• R. Sarika, LTS
• I. Gounaki, LTS

9. EnvEng Fire Safety Committee
• E. Kastanaki, STLS
• R. Sarika, STLS

10. EnvEng Students’ Records Supervisor
• A. Manousakis, Associate Professor

11. EnvEng Financial Records
• R. Sarika, STLS
• N. Vakakis, STLS

12. EnvEng Quality Assurance IT System and Students’ Evaluation Recording
• T. Glytsos, LTS
• A. Koutroulis, LTS,
• I. Kanakis, STLS

13. EnvEng Internal Evaluation Team
• A. Manousakis, Associate Professor
• N. Paranychianakis, Assistant Professor
• D. Venieri, Assistant Professor
• N. Xekoukoulotakis, Assistant Professor

14. EnvEng Web site Content Management
• A. Papadopoulou, LTS

15. EnvEng Undergraduate and Postgraduate Studies Guide
• A. Papadopoulou, LTS
• K. Tyrovola, LTS
16. Outward activities - High Schools’ visits planning
   • A. Pantidou, STLS
   • A. Spyridaki, LTS

17. TUC Special Research Funds Unit (EnvEng Representative)
   • E. Gidarakos, Professor (member)
   • C. Chrysikopoulos, Professor (alternate member)

18. TUC Quality Assurance Unit (EnvEng Representative)
   • M. Lazaridis, Professor

19. TUC Property and Technological Park Development and Management Company
   • E. Gidarakos, Professor (Vice-President)

20. TUC Health and Safety Committee
   • D. Venieri, Assistant Professor (representing TUC Faculty members)
   • A. Pantidou, STLS (representing TUC STLS members)

21. TUC Committee on Continuous Learning
   • I. Kanakis, STLS

---

2.6 Structure of the School

The School of Environmental Engineering is organized in three Divisions, each including a number of laboratories on various subjects. The Divisions are:

ENVIRONMENTAL MANAGEMENT (DIVISION I):
ENVIRONMENTAL PROCESS DESIGN AND ANALYSIS (DIVISION II):
The second Division covers the following scientific areas: Biochemical processes, biological treatment of solid, liquid and gas wastes, application of cell cultures to environmental protection. Environmental microbiology, environmental toxicology, environmental biotechnology, design of subsurface biological barriers. Phytoremediation and wetlands. Air pollution, indoor air quality, aerosol dynamics in the atmosphere. Biogeochemical cycles and energy flow in ecosystems. Fluid dynamics, heat & mass transfer, unit operations. Physico-chemical processes, chemical reaction engineering, environmental thermodynamics, thermo-physical properties, chemical equilibrium, partition of pollutants in the environmental phases. Environmental Organic Chemistry-Micropollutants.

ENVIRONMENTAL HYDRAULICS & GEOENVIRONMENTAL ENGINEERING DIVISION (DIVISION III):
The objectives of the Division III include: Environmental hydraulics, hydrology, geology and hydrogeology as well as the environmental applications of the forementioned subjects (wastewater pipe nets, irrigation, runoffs, water resources, flow in porous media, contamination of soils and ground waters, drinking water pipe systems). In addition some other interests of the Division III include remediation techniques for contaminated soils and ground waters, life-cycle analysis and performance-based design of structures and infrastructures, structural and geotechnical earthquake engineering, computational dynamics. Applications of Geographical Information Systems (GIS) to environmental data.
2.7 ACADEMIC STAFF

The Academic staff of the School is in the following categories:

✓ **Professors.** There is a three-level academic rank system, from Assistant Professor to Associate Professor to Professor in ascending order. Additional needs for course instructors, researchers and laboratory instructors are often covered by scientists hired in accordance with the provisions of the current legislation.

✓ **Laboratory Teaching Staff (LTS).** The LTS members perform specific laboratory and applied educational duties which primarily consist of conducting laboratory sessions and recitations for the courses taught.

✓ **Specialized Technical Laboratory Staff (STLS).** The STLS members provide fundamental support to the School operation by offering specialized technical services in order to better serve the educational and research activities at the School.

### PROFESSORS

#### Full Professors

**Constantinos Chrysikopoulos:** Environmental Technology, B.Sc. in Chemical Engineering (1982), University of California, San Diego, USA, Engineer Degree in Civil Engineering (1986) (Geothermal Program), Stanford University, USA,
M.Sc. in Chemical Engineering (1984), Stanford University, USA, Ph.D. Civil and Environmental Engineering (1991) [Ph.D. Minor: Petroleum Engineering], Stanford University, USA.

**Evangelos Gidarakos:** Toxic and Hazardous Waste Treatment and Disposal, B.Sc. in Physics (1977) University of Hamburg, Germany, Ph.D. (1980) University of Hamburg, Germany.

**Nicolas Kalogerakis:** Biochemical engineering and environmental biotechnology, Dipl. in Chemical Engineering (1977) National Technical University of Athens, M.Eng. (1979) McGill University, Montreal, Canada, Ph.D. (1983) University of Toronto, Canada.

**Ioannis Tsanis:** Water resources management and coastal engineering, Dipl. in Civil Engineering (1976) Aristotle University of Thessaloniki, Greece, M.Sc. (1979) University of Toronto, Canada, Ph.D. (1986) University of Toronto, Canada.

**Ioannis Yentekakis** Physical chemistry, Dipl. in Chemical Engineering (1982) University of Patras, Ph.D. in Chemical Engineering (1987) University of Patras, Greece.
**Associate Professors**

**Antonis Manousakis:** Banach space Theory, B.Sc. in Mathematics (1992) University of Athens, Greece, Ph.D. in Mathematics (1998) University of Athens, Greece.

**Yiannis Tsompanakis:** Structural mechanics and earthquake engineering, Dipl. in Civil Engineering (1992) National Technical University of Athens, Greece, Ph.D. in Computational Mechanics (1999) School of Civil Engineering, National Technical University of Athens, Greece.

**Assistant Professors**

**Apostolos Giannis:** Municipal and Hazardous Solid Waste Management and Treatment. B.Sc. in Environmental Sciences (2001), Department of Environment, University of the Aegean, M.Sc., Department of Environmental Engineering (2003), Technical University of Crete, PhD, Department of Environmental Engineering (2008), Technical University of Crete

**Nikolaos Paranychianakis:** Agricultural Engineering, Natural Treatment Systems, Effluent Reuse, and Irrigation Requirements B.A. in Natural

Dr. Athanasios Papadopoulos: B.Sc. in Physics with Environmental Science (1998) University of Sussex, M.Sc. in Oceanography (1999) University of
Southampton, Ph.D. in Environmental Engineering (2009) Technical University of Crete. LTS for the Natural Hazards, Tsunami and Coastal Engineering Laboratory.

**Dr. Aphrodite Papadopoulou:** Diploma in Chemical Engineering (1988) Aristotle University of Thessaloniki, Ph.D. in Chemical Engineering (1993) University of Illinois at Urbana-Champaign, USA. LTS for the Transport Phenomena & Applied Thermodynamics Laboratory.

---

University of Crete. STLS for the Environmental Microbiology Research Unit and the Ecology and Biodiversity Laboratory.

**ADMINISTRATIVE STAFF**

**Georgia Poniridou:** School Secretary, permanent employee, B.A. in Management/Economics, Panteion University of Social and Political Sciences, Greece.

**Dimitra Pateraki:** Permanent employee, coordinator of undergraduate and postgraduate studies (diplomas, registrations, certificates).
2.8 FACILITIES

BUILDING FACILITIES

The School of Environmental Engineering occupies three buildings on campus (K1, K2 and K3) with a total area of 3000 m². The first floor of building K2 houses the Secretariat. Laboratories are located on the ground floor of all buildings and in specially designed establishments on campus.

LABORATORY FACILITIES

The educational and research processes at the School of Environmental Engineering are supported by the following laboratories:

Toxic and Hazardous Waste Management Laboratory
Division I – Evangelos Gidarakos, Professor

The main goal of the laboratory is the development of advanced scientific technologies, the promotion of scientific research, as well as the transfer of knowledge in the area of hazardous waste management. Physicochemical, biological and thermal treatment of hazardous waste, safe disposal at special landfills, waste recycling and hazardous waste management, as well as soil and groundwater remediation from hazardous wastes, are some of the basic fields on which the laboratory focuses.

Renewable and Sustainable Energy Systems Laboratory
Division I – Theocharis Tsoutsos, Professor

The Unit of Renewable and Sustainable Energy Systems covers a wide range of Applied Research and Technological Development, Energy Planning and Sustainable Energy Management on the following groups of activities: Management Systems Renewable Energy and Energy Conservation (regional-
local energy planning, sustainable management of natural resources, technology transfer, Life Cycle, Technical/Economic/Environmental evaluation), biofuels (use of agricultural and stockbreeding residues, production of liquid biofuels, biofuels for buildings heating, assessment of technical and financial resources available), Solar Air Conditioning (design active solar air conditioning systems, technical and financial evaluation), sustainable energy systems (Environmental Impact analysis using energy Systems, Renewable energy and Environment, Assessment of Renewable Sources of Energy under uncertainty, development of sustainable energy systems, renewable energy industry analysis).

**Design of Environmental Processes Laboratory**  
**Division I – Petros Gikas, Associate Professor**  
The major research activities of the "Design of Environmental Processes" Research Unit is the scale-up of Environmental Engineering processes. Focus is on novel processes for wastewater treatment and water reclamation and reuse, as well as processes for the management and valorization of solid wastes and sludges. Special attention is given to bioprocesses of immobilized biomass, to nitrogen removal from wastewaters using the "anammox" process, to the effects of heavy metals on microbial behavior and to disinfection processes. Integrated water resources management with emphasis on non-conventional water sources. Optimization of environmental process, cost analysis and environmental impact assessment. Research is carried out in laboratory, and at the field, with large scale pilot applications, with combination of experimental, informatics and design processes. The Research Unit has established collaboration with international and Greek universities, research centers and private enterprises, which are active on environmental engineering.

**Energy Management in the Built Environment Laboratory**  
**Division I – Dionysia Kolokotsa, Associate Professor**  
Environmental Law and Governance Laboratory
Division I – Efpraxia (Aithra) Maria, Associate Professor
Study, research and implementation of Environmental Law and Governance basic principles in novel interdisciplinary issues with International, EU and national character.

Banach space theory Laboratory
Division I – Antonis Manousakis, Associate Professor
Research is focused in the Geometry of Banach space (distortion problem, heterogeneous structures, indecomposable Banach spaces) and in Operators on Banach spaces.

Stochastic models for tumor growth Laboratory
Division I – Tryfon Daras, Assistant Professor
The Laboratory study and construct mathematical models (deterministic and stochastic) for the growth of various types of tumors. Special interest is given in breast tumor growth.

Environmental Catalysis Laboratory
Division I – Paraskevi Panagiotopoulou, Assistant Professor
Research activities of the laboratory of Environmental Catalysis are focused in the fields of Heterogeneous Catalysis and, especially, in materials synthesis and characterization, catalyst development and evaluation, and investigation of reaction kinetics and mechanisms, with emphasis given in environmental and energy-related applications. Catalyst characterization is being carried out employing measurements of the total and exposed metallic surface area (BET, selective chemisorptions of gases), temperature-programmed techniques under transient conditions (TPR, TPO and TPD) and spectroscopy techniques (FTIR, XRD etc.). Of particular interest is the investigation of the surface chemistry and structure of dispersed metallic systems and of reducible metal oxides and their mixtures. Primary goals are the identification of the key parameters that determine catalytic activity and selectivity, and the investigation of reaction mechanism

Biochemical Engineering & Environmental Biotechnology Laboratory
Division II – Nicolas Kalogerakis, Professor

Atmospheric Aerosols Laboratory
Division II – Mihalis Lazaridis, Professor
Study of the dynamics of atmospheric aerosols, heterogeneous reactions in the atmosphere, development and application of air quality models, nucleation
processes, measurements of air pollutants and meteorological parameters, modeling and measurements of indoor air quality, dosimetry modeling and transport of pollutants inside the human body.

**Environmental Engineering and Management Laboratory**  
**Division II – Evan Diamadopoulos, Professor**  
The Laboratory of Environmental Engineering and Management of the Technical University of Crete is involved (in terms of teaching and research activities) with the development and application of technologies for the appropriate management and treatment of water, wastewater and solid wastes. The Laboratory has several advanced analytical systems for the determination of organic pollutants and heavy metals in water and wastewater, as well as several lab-scale and pilot scale treatment units.

**Aquatic Chemistry Laboratory**  
**Division II – Elia Psillakis, Professor**  
Current research projects at the laboratory of Aquatic Chemistry focus on: (i) the development and application of novel analytical methodologies used for the detection emerging and persistent organic pollutants in a variety of environmental matrices (ii) studying the fate and monitoring the contamination levels of trace organic chemicals in natural or engineered environments and (iii) the development of novel on-site monitoring techniques used for the detection of anthropogenic pollutants.

**Environmental Microbiology Laboratory**  
**Division II – Danae Venieri, Assistant Professor**  
The Environmental Microbiology Laboratory is involved with the evaluation of microbiological quality of aquatic environment and the study of environmental microorganisms. We focus on the application of novel molecular techniques for the detection, isolation and further study of microorganisms. Research topics include microbial resistance against variable antibiotic agents, gene expression, resistance transport and evaluation of disinfection methods. The main groups of microorganisms under study include bacteria, parasites, bacteriophages and enteric viruses, which either are used as qualitative and quantitative indicators of aquatic environment, or they have great impact on public health.

**Ecology and Biodiversity Laboratory**  
**Division II – Danae Venieri, Assistant Professor**  
The Ecology and Biodiversity Laboratory is focused on the study of ecosystems, the interactions developed among communities and the determining

**Environmental Organic Chemistry and Micro-pollution Laboratory**

**Division II – Nikolaos Xekoukoulotakis, Assistant Professor**

Degradation of organic pollutants in aqueous phase (water and wastewater) using oxidizing chemical degradation methods such as UV radiation in the presence of \( \text{H}_2\text{O}_2 \) (UV/\( \text{H}_2\text{O}_2 \)), Ozone (O\(_3\)), homogeneous and heterogeneous photocatalysis and electrochemical oxidation. Green Chemistry and Technology with emphasis on the development and implementation of environmentally friendly processes.

---

**Physical Chemistry & Chemical Processes Laboratory**

**Division II – Ioannis Yentekakis, Professor**

The laboratory of Physical Chemistry and Chemical Process has excellent scientific equipment, active and productive faculty members, young and older researchers, postgraduate students and international collaborations thus, ensuring high quality education and research work.

**Water Resources Management and Coastal Engineering Laboratory**

**Division III – Ioannis K. Tsanis, Professor**

The Water Resources Management and Coastal Engineering Laboratory, develops innovative tools for solving complex environmental/water resources engineering problems. We focus on the development and application of advanced state-of-the art computer models to be used in computational hydraulics and hydrology supporting decision making for engineering design

**Geoenvironmental Engineering Laboratory**  
**Division III – George P. Karatzas, Professor**  
Environmental fluid mechanics, environmental geology and hydrogeology, flow in porous media, contamination of soils and ground water remediation techniques for contaminated soils and ground waters, water intake structures, simulation of groundwater flow and mass transport, optimization methods for environmental systems, optimal groundwater management, saltwater intrusion, development and applications of geo-environmental software packages.

**Hydrogeochemical Engineering and Soil Remediation Laboratory**  
**Division III – Nikolaos P. Nikolaidis, Professor**  
Water quality management at the watershed scale, development of hydrogeochemical models, pollution prevention and sustainable development. Assessment and remediation of soils polluted by heavy metals as well as the impact of organic pollutants on the fate and transport of heavy metals in the environment. Development of new technologies and use of existing ones for the remediation of soils and aquatic ecosystems from inorganic pollutants.

**Environmental Engineering Laboratory (TUCeeL)**  
**Division III – Constantinos V. Chrysikopoulos, Professor**  
Experimental as well as theoretical aspects of contaminant transport in porous media and environmental systems: (1) Fate and transport of viruses in subsurface formations, (2) Transport of polydisperse colloids in natural fractures, (3) Dissolution of multi-component nonaqueous phase liquids in porous media, (4) Mathematical modelling of reactive transport in subsurface formations, (5) Development of an environmentally friendly technology for groundwater remediation using acoustic waves, and (6) Solar energy applications in environmental systems.
Natural Hazards, Tsunami and Coastal Engineering Laboratory
Division III – Costas Synolakis, Professor

Natural Hazards: Research is focused in mitigation of natural hazards and extreme events, (such as bush fires, flooding, storms and sea level rise) and the evaluation of their impact. (See publications and also read the editorials of the laboratory in Wall Street Journal 2005, 2006 and 2007 and the reports in New York Times 2004 and 2006).

Tsunami: Research includes experimental, analytical and numerical simulation of tsunamis generated by either underwater landslides or earthquakes and the evaluation of run-up and inundation on beaches, preparation of inundation maps for civil protection agencies and field surveys following tsunamis to measure run-up and inundation.

Coastal Engineering: Research is focused on coastal protection from erosion, extreme events, and sea level rise due to greenhouse effect and the restoration and long term maintenance of beaches using soft solutions, such as beach nourishment and artificial reefs. Research covers the Pacific and Indian Ocean and the Mediterranean Sea and findings have been presented in more than 20 documentaries in Discovery, BBC, History, ZDF and National Geographic from 1997 until today.

Geodesy and Geographical Information Systems Laboratory
Division III – Androniki Tsouchlaraki, Assistant Professor

Geodesy – Topography and Environment, Geographical Information Systems and Spatial Analysis, Landscape analysis and visual impact assessment.
Computational Dynamics & Energy Laboratory
Division III – Yiannis Tsompanakis, Associate Professor

Computational Dynamics & Energy (CODEN) Research Group of TUC main expertise is the development and application of advanced simulation techniques and computational methods for structures and infrastructures (buildings, geostructures, lifelines, etc). Scientific interests of CODEN group include structural and geotechnical earthquake engineering, soil-structure interaction, structural optimization, probabilistic mechanics, structural integrity assessment & monitoring, mitigation of geohazards, life-cycle analysis & performance-based design, artificial intelligence methods in engineering, etc. CODEN group has many cooperations with other scientific groups in Greece and other countries and has participated in national and international projects. CODEN group has given particular emphasis on various engineering problems related to geohazards for structures and energy infrastructure, aiming to assist in the protection of the environment, population and energy infrastructures (transportation networks, pipelines, plants, tanks, etc) from natural and man-made disasters. Indicative related research and engineering practice fields: a) design of onshore and offshore gas pipelines against geohazards (active faults, landslides, soil liquefaction, etc), b) seismic design of liquid fuel tanks and storage terminals, c) onshore and offshore wind turbine design with emphasis on dynamic soil-structure interaction, d) seismic vulnerability of dams, waste landfills, tailings dams, etc.
3 Undergraduate Program Regulation

3.1 Registration

New undergraduate students originally register via a web application of the Ministry of Education in the electronic address: https://eregister.it.minedu.gov.gr
Further details are given in the relevant Ministry press release.

Then students should be presented to the Secretariat of the School of Environmental Engineering for final registration. Students should submit to the Secretariat the following:
1. Printed registration form provided by the electronic application of the Ministry
2. Copy of their ID card
3. Certificate copy for their participation in the Panhellenic Exams
4. Copy of secondary education certificate
5. One passport photo

Alternatively, the above documents can be sent by mail to the address of the School Secretariat. In this case, the printed registration form must be endorsed with the signature authenticity.
3.2 Student Identity Card and Certificates

Each student receives, immediately upon registration, a Student Identity Card and a Transportation Pass that qualifies the student for reduced transportation fare as stated by the relevant provisions. Student status is acquired on registration and terminates upon diploma award. Students have full medical and hospital coverage.

The following certificates are issued by the Student Services Centre upon request:

- Certificate of Student Status
- Grade Transcript
- Certificate of Student Status for use with office of military services
- Diploma Certificate
- Certificate of Studies Completion
- Graduation Certificate

The above documents can also be issued in English. Books and notes, recommended by faculty members and instructors to cover teaching needs, are distributed free of charge via the Eudoxus system (http://eudoxus.gr/).
3.3 Student Status

Student status is acquired on registration to the School of Environmental Engineering and terminated upon the award of the Diploma. Student status is automatically lost upon expiration of the maximum study period. Students have the right to discontinue their studies for a maximum period of ten (10) semesters, consecutive or not, by submitting a written request to the School Secretariat. These semesters are not counted towards the maximum duration of study. Students who discontinue their studies lose temporarily their student status for the period of suspension. Student status is restored immediately upon return from suspension.

3.4 Services to Students

Upon registration, students are entitled to full medical care by the Technical University of Crete so long as they don’t have medical coverage directly or indirectly by another entity.

Additionally, the Eudoxus system is a digital innovative service for the immediate and integrated provision of university books and notes to students (http://eudoxus.gr)

In addition, students have free access to both the library and the Digital Library Services (http://www.library.tuc.gr/) which provide bibliographic databases for the search of articles, books, conference proceedings and others, electronic journals and books, dictionaries, encyclopedias. Students can also order articles through library services.

Scholarships to undergraduate students are granted as follows:

**S.S.F. Scholarships:** The State Scholarship Foundation awards scholarships to students who top the School entrance exams and to the students at the top of their class.

**ERASMUS+ exchange programme Scholarships:** The Technical University of Crete and the Environmental Engineering School participate in the ERASMUS+ exchange programme, in force since January 1, 2014, which supports student
mobility for the purposes of studying (Lifelong Learning Program, LLP) and training (Placements). ERASMUS+ scholarships are funded by the State Scholarship Foundation. For more information, students may contact the University Erasmus office (Mrs. Elena Papadogeorgaki, tel.: 2821037470, e-mail: erasmus@isc.tuc.gr, building E5, office 015, University Campus) or visit the website http://www.tuc.gr/145.html. Coordinator for the ERASMUS+ programme at the Environmental Engineering School is Dr. Nikos Xekoukoulotakis, Assistant Professor (tel.: 2821037772, e-mail: nikos.xekoukoulotakis@enveng.tuc.gr, building K2, office 115).

Michailakis Scholarships: Dr. E. Michailakis awards scholarships to the student who topped the School entrance examinations and to the top student of each class.

Limmat Scholarships: The Swiss non-profit Limmat Stiftung Foundation awards scholarships for excellent performance to the top three graduates of the Environmental Engineering School.

### 3.5 Qualification Exams

Graduates of other Higher Educational Institutes, of Technological Educational Institutes or of Schools with two-year degree programs may register at the School of Environmental Engineering after passing the entrance qualification examination. This examination is on specific courses announced at the end of the spring semester of each academic year. Applications for participation in the entrance qualification examination must be submitted during the first half of November and the examination is held in early December each year. The content of the courses the candidates are examined on is described in the current Undergraduate Studies Program Guide.
3.6 Duration & Curriculum

STUDIES

The academic year begins on **September 1st** of each year and ends on **August 31**st of the following year. The educational program of studies for each academic year is divided in **two semesters**.

The teaching methods employed by the School of Environmental Engineering follow modern educational standards and, depending on the course, include open lectures to broad audiences, targeted seminars to small groups, tutorials and recitations, laboratory exercises and practical training.

Open lectures are not mandatory, although attendance is strongly recommended.

Additional educational activities take place in small, predefined groups of students and attendance is mandatory.

Laboratory exercises play an important role in the training of Environmental Engineers. Specialized laboratories provide consolidated knowledge and practice via planned experiments.

The total duration of undergraduate studies is **ten (10) semesters**, including the diploma thesis project.

ACADEMIC SEMESTERS AND OFFICIAL HOLIDAYS

The exact start and end dates for the semesters and the exam periods are determined by the Senate of the Technical University of Crete. Each semester includes at least thirteen (13) full weeks of classes and two (2) weeks of examinations.

**Official Holidays** during the academic year are:

- **Fall Semester**
  - October 28 (National holiday)
  - November 17 (Commemoration of the Athens Polytechnic uprising against the Greek junta in 1973)
- November 21 (Local religious holiday of Chania - The Presentation of Virgin Mary)
- December 24 to January 6 (Christmas Holiday Break)
- January 30 (Three Hierarchs – National holiday for all educational institutions)

- Spring semester
  - Ash Monday
  - March 25 (National holiday)
  - Holy Week and Easter Week (Easter Holiday Break)
  - May 1 (Labour Day)
  - Student elections day
  - Whit Monday

**CURRICULUM**

The curriculum for an academic year is determined at the end of the spring semester of the preceding academic year. The curriculum includes:

- the titles of required and elective courses,
- the numbers of hours per week for lectures and tutorials for each course,
- the number of hours per week for laboratory work for each course,
- the number of credits for each course,
- the number of ECTS credits for each course,
- the detailed content description for each course.

Courses are divided in two categories: (a) **required** and (b) **elective**.

The first category includes core courses that provide students with fundamental knowledge; students should register for and successfully complete all required courses.

The second category includes a large number of specialized courses; each student should select, register for and successfully complete a predetermined minimum number of elective courses.

The organisation of courses in semesters and their ordering in the curriculum is indicative and not mandatory except for the sequences of prerequisite courses. The course ordering is presented in the Standard Undergraduate Program Guide of the Environmental Engineering School.

**COURSE REGISTRATION AND ATTENDANCE**

In each semester, students are allowed to register for up to \( v + 7 \) courses, where \( v \) represents for the number of courses in the curriculum for the corresponding semester. In the 9th semester, students may register for up to 14 courses and from the 10th semester onwards students may register for up to 16 courses.

Students have the opportunity to participate in two (2) examination periods for each course they have registered for during an academic semester. For the fall semester, the first examination period is held in January while the second in September. For the spring semester, the first examination period is held in June whereas the second one is also held in September.

Students who do not satisfy the requirements for the successful completion of a course even after the second examination period have to re-register again for
the particular course in a subsequent semester and fulfil all attendance and examination requirements anew.

Course registration is conducted electronically via the special Students Records Web-site of the Technical University of Crete http://websrv.stdnet.tuc.gr/unistudent. Students are required to have an E-services account which is created at the Computer Centre of the University. If you do not have such an account, please create one and properly notify the Secretariat of the School of Environmental Engineering.

**EDUCATIONAL VISITS**

Educational visits, including visits to companies and industries, of up to one week duration, are foreseen in the frame of the required courses for the third and fourth year of studies. Field trips take place during a prearranged, in the academic calendar, time period and are held only if participation exceeds 70% of the year's student population.

**INTERNSHIP**

The internship provides students of the School of Environmental Engineering an excellent opportunity to learn from close up about activities related, directly or indirectly, to their field of studies. Taking into account the young age of the School (the first class of students graduated in 2002) and the as of yet unrecognised (institutionally and in practice) professional rights of Environmental Engineers, contact with the labor market is necessary in order to make known the human resources that will be soon available to staff companies, organisations and businesses. On the other hand, faculty members get the opportunity to establish links with the industry and possibly develop partnerships beyond the scope of training (for example at research level). In addition, the School takes the opportunity to assess the quality of the education provided to its students based on the evaluations from company executives.

**COURSE GRADES**

Grades for all courses are expressed on a 0-10 scale in increments of 0.5 with 5 (five) being the lowest passing grade. Instructors are responsible for submitting to the Secretariat the grades for the courses taught in a semester within a maximum of three (3) weeks from the end of the semester examination period.

The weighting factor for each course depends on the number of credit units assigned to the course according to the following table:

<table>
<thead>
<tr>
<th>CREDIT UNITS</th>
<th>WEIGHTING FACTOR</th>
</tr>
</thead>
<tbody>
<tr>
<td>1-2</td>
<td>1.0</td>
</tr>
<tr>
<td>3-4</td>
<td>1.5</td>
</tr>
<tr>
<td>More than 4</td>
<td>2.0</td>
</tr>
</tbody>
</table>
COURSE EQUIVALENCY

It is possible for students enrolled in the School of Environmental Engineering through transfer from another higher education institution or after passing the entrance qualification examination to transfer credit for courses taken at another institution on the basis of course equivalency. In order to establish the equivalence of a course to a corresponding course required by the School for the diploma in Environmental Engineering, the following conditions must be met:

- The student must have successfully completed the course in another School of the Technical University of Crete or in other Higher Education Institution in Greece or abroad.
- The Undergraduate Studies Committee, in cooperation with the instructor responsible for the corresponding course, must ascertain the equivalence of the course’s content to that of the corresponding course as described in the undergraduate studies program of the Environmental Engineering School.
- In the case of equivalence, the student is credited with the Credit Units of the corresponding course. If the course was taken at a higher education institution in Greece, the course grade is also transferred. If the course was taken at a university abroad, the student is credited with the Credit Units of the corresponding course and with an equivalent grade.

In ambiguous cases not covered by the conditions above, the Undergraduate Studies Committee makes a recommendation to the General Assembly, which ultimately decides on the course equivalency.

DIPLOMA THESIS

Starting the Diploma Thesis

According to the university studies regulations, the 10th semester is free of courses and intended for work on the diploma thesis, which is a requirement for the completion of the undergraduate studies. Students who have completed the eighth semester and have less than ten courses left to complete the course requirements may start working on their thesis in order to be able to complete it by the end of the 10th semester.

The topic of the diploma thesis may fall into a wide range of fields of specialization within Environmental Engineering. The objective of the thesis is twofold: first to introduce undergraduate students to research and second, to further develop the science of Environmental Engineering.

Thesis topics and a brief description of the study objectives for each topic are drafted by the School Faculty each academic year, and are available at the Secretariat.
Composition of the three-member Supervisory Committee
The three-member supervisory committee is a committee that supervises a student's work towards his/her diploma thesis. It consists of a primary supervisor (advisor), who acts as chair, and two committee members. Serving as members of the supervisory committee may be professors of the School of Environmental Engineering or, of any other School of the Technical University of Crete, professors of any other approved higher education institution in Greece or abroad, Ph.D. holders employed as researchers in recognized institutions/organisations or scientists of recognized standing working in the private sector. However, the primary supervisor must be a member of the faculty of the School of Environmental Engineering. The committee members have the task of making suggestions for changes and improvements. The thesis advisor meets with the student on a regular basis to review progress on the thesis. All three committee members must be present during the thesis defense.

The diploma thesis topic and the composition of the three-member supervisory committee must be approved by the General Assembly.

Diploma Thesis content
The subject of the thesis should be a standalone research topic. The final written report for the diploma thesis should include: documentation supporting the research gap addressed in the work, full literature review, description of the adopted experimental procedure and methodology, presentation and discussion of the derived results, conclusions and recommendations. The thesis report should also include all data documenting the results, such as tables, graphs, figures and photos, compiled in annexes. Thus, every student should pursue the in-depth study of the subject as well as provide a coherent and comprehensive presentation of the work.
**Diploma Thesis duration and deadlines**

The minimum time for the diploma thesis preparation is one academic semester. The preparation should be continual, intensive and well-organized in order to make efficient use of time and minimize the required preparation time. In the case of collaborative work among two or, at most, three students, a single written report must be prepared irrespective of the number of collaborating students; however, each student is evaluated separately. In order to be able to set a thesis defense date, a student must have successfully completed all courses in the curriculum. The date and time for the oral defense is set in consultation with the supervisory committee. A summary of the thesis is uploaded to the university’s website prior to the oral defense. The thesis oral defense must take place within 20 days of the completion of an examination period (January, June, September) for a student to be awarded the diploma in the diploma award ceremony that follows that examination period.

**Diploma Thesis Grade**

Each of the three supervisory committee members grades the diploma thesis with respect to the quality of content, the quality of the written report and that of the oral presentation. The thesis grade is the average of the members’ grades and contributes 20% to the final diploma grade, that is, the thesis grade corresponds to the average grade of approximately two semesters. Following the successful thesis defense, students must submit one (1) copy to the library of the Technical University of Crete and three (3) copies to the members of the supervisory committee.

### 3.7 Requirements for the Diploma in Environmental Engineering

The requirements for earning the Diploma in Environmental Engineering are as follows:

- **Enrollment** in the Environmental Engineering School and registration for courses for at least ten (10) semesters, for regularly enrolled students.
- **The required number** of courses leading to the Diploma in Environmental Engineering is that described by the curriculum in force during the student’s first enrollment in the Undergraduate Program. However, students may have to take additional courses due to changes in the undergraduate program of studies included in amendments to the Undergraduate Program Guide during the period of their studies.
- **The Diploma grade** is calculated from the grades of all courses required for graduation and from the Diploma thesis grade. The Diploma Thesis grade contributes 20% to the final Diploma grade.
- In the calculation of the Diploma grade, the grade for every course is multiplied by the course weighting factor. The sum of the weighted grades divided by the sum of the weighting factors for all courses yields the mean course grade. The mean course grade contributes 80% to the final Diploma grade while the Diploma thesis grade contributes the remaining 20%.

## Detailed Undergraduate Courses Curriculum

All courses in the curriculum are listed in academic semesters in the following summary tables. The code, the title, the number of hours per week for lectures (T), tutorials (E) and laboratories (L), the total number of hours per week (H), the number of Teaching Units (Τ.U.), as well as the number of ECTS credits are listed for each course. A list of all elective courses offered per semester from which students are free to choose is also presented along with some restrictions on each choice.

### 1st Semester Courses

**TOTAL OF ECTS 30**
5 Detailed descriptions of courses

1st Semester

**Required Courses**

**[MATH 101] DIFFERENTIAL AND INTEGRAL CALCULUS I**

**[PHYS 101] PHYSICS I**

**[MRED 121] ENVIRONMENTAL GEOLOGY**
Approaches to natural phenomena, Geosciences and their research objectives, Cosmology, the Milky Way galaxy, the components of the universe, Earth structure, crystalline state of matter - Crystals, Elements of Orictology, Magmatic, sedimentary and metamorphic rocks, Stratigraphic correlations, absolute and relative age of rocks, tectonic - petrological - geochemical cycle, Carbon cycle, the hydrologic cycle, geomorphological and morphotectonical elements.
Sequence of stratigraphic geological processes and principles, introduction to topographic maps, topographic cross-sections of varying scale, introduction to geological maps, simple geological cross-section, geological cross-section of
successive layers of different thicknesses, geological cross-section mismatch layers, geological cross-section of faults, geological structure with intercept disparity layers, fracture and venous infiltration, geological cross-section of strands, problem reversing - definition of marshaling evidence boreholes, construction of geological cross-section form geologic maps.

**[ENVE 133] ENVIRONMENTAL SYSTEM USING COMPUTER AIDED DESIGN**
Introduction to the techniques of designing in PC with use of CAD. Configuration of drawing environment (objects, scales, printers). Basic concepts of CAD system, structure and drawing processing. Properties of objects. Dimensions, text introduction and processing. Surface and solid elements in design space. Axonometric and perspective projections of objects.

**[MATH 105] INTRODUCTION TO COMPUTER PROGRAMMING**

**[ENVE 112] ECOLOGY**

**[ENVE 113] INTRODUCTION TO ENVIRONMENTAL ENGINEERING SCIENCE**
Introduction to the basic concepts of the Environmental Engineering Science (pollution, remediation, protection, environmental management), basic design concepts (flow diagrams, process efficiency, mass and energy balances, environmental applications), introduction to waste water, solid waste and air pollution treatment.

**ENGLISH I [Seminars]**
English I is a non-credited course/seminar offered to students in preparation for the advanced level courses English III and English IV. The target level of English I is B2, according to The Common European Framework of Reference for Languages (CEFR). For students who have not achieved a certificate at level B2, classroom teaching aims at preparing them for the certificate examinations in English at this level.

**GERMAN I [Seminars]**
The course teaches German to students who already have basic knowledge of the German language. It aims at developing students' skills in writing and speaking at a practical level. It includes introduction in reading comprehension strategies, analysis of authentic, contemporary texts of graded level, exercises to enrich one's vocabulary, as well as, practice in selected grammar topics. The e-classroom, the electronic exercises on the Language Centre website along with the audiovisual material of autonomous learning are complementary to
the course. Students have even the possibility to enrol in a speaking and writing practice course. Beginners’ courses are also offered in German A I and A II as prerequisites for the German I course. These courses aim at teaching the written and spoken language necessary for everyday communication in a German-speaking environment. They include weekly classroom attendance as well as the use of the autonomous learning audiovisual material of the e-classroom.

---

<table>
<thead>
<tr>
<th>2nd Semester</th>
<th>Required Courses</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>[MATH 102] DIFFERENTIAL AND INTEGRAL CALCULUS II</strong></td>
<td>Functions of two and more variables. Equations of solids (cone, cylinder, etc.). Cylindrical polar spherical coordinates. Parametric representation of curves and figures Differential Geometry (Curvature, vertical vectors. etc.). Inner and outer product of vectors. Partial Derivatives of functions of several variables, dir, grad, Curl and basic theory of vector fields. Lagrange multipliers and other extrema criteria for functions of several variables. Differential functions of several variables. Line Integrals. Double triple integrals. Applications in Physics and Geometry (Calculating volumes, moments of inertia, surface area, etc.). Surface Integrals. Applications to the flow of fluids. The theorem of Green, vector expression of TH Green, parametric representation of surfaces and applications (flow, etc.). The Theorem of Stokes (Applications in Physics). The Divergence Theorem.</td>
</tr>
</tbody>
</table>
**[ENVE 162] GEODESY**
Introduction and historical review. Shape and size of earth. Reference surfaces. Reference point definition of the position, computational problems. Geodesy measurements, measurements and errors, instruments and methods of measuring distances and elevation angles, positioning point, the positioning system GPS, introduction to cartography, cartographic projections, the topographical map, a representation of terrain.

**[ENVE 126] ENVIRONMENTAL MICROBIOLOGY**

**ENGLISH II [Seminars]**
English II is a continuation of English I non-credited course/seminar offered to students in preparation for the advanced level courses English III and English IV. The target level of English II is B2 according to The Common European Framework of Reference for Languages (CEFR). For students who have not achieved a certificate at level B2, classroom teaching aims at preparing them for the certificate examinations in English at this level.

**GERMAN II [Seminars]**
German II deepens and reinforces fundamental knowledge acquired in German I. The objective of the course is to develop students’ ability to process and comprehend various kinds of authentic texts on their own, autonomously, to expand their vocabulary and produce written and spoken speech. Special emphasis is given on listening comprehension skills. Sentence structure is the main point of reference regarding grammar. The e-classroom, the electronic exercises on the Language Centre website along with the audiovisual material of autonomous learning are complementary to the course. Students have even the possibility to enroll in a speaking and writing practice course.

**3rd Semester**

**[MATH 201] NUMERICAL LINEAR ALGEBRA**
[**MATH 203**] **ORDINARY DIFFERENTIAL EQUATIONS**

[**MATH 204**] **PROBABILITY & STATISTICS**

[**MECH 201**] **ENGINEERING MECHANICS – STRENGTH OF MATERIALS**

[**ENVE 221**] **FLUID MECHANICS**

[**LANG 201**] **ENGLISH III**
English III combines a programme of self-access learning at the Language Centre with a series of thematic work modules to be covered in class based on a student’s field of study. The modules focus on language, texts, and writing
skills specifically targeted at what students learn within the context of their School. Students are also expected to register and participate in the e-class for the course as well as utilize the recommended or required resources at the Language Centre.

The final mark will be based on the exam at the end of the semester as well as the quizzes in the e-class. Quizzes count for thirty percent (30%) of the final mark.

[LANG 203] GERMAN III
German III focuses on introducing and teaching terminology, at the written as well as the spoken level. The course includes reading, processing and critically approaching authentic texts (articles, technical texts) of graded level, directly related to the terminology of the School of Environmental Engineering. Forms and structures of writing production are reinforced. Special emphasis is given on listening comprehension skills.

The e-classroom, the electronic exercises on the Language Centre website along with the audiovisual material of autonomous learning are complementary to the course. Students have even the possibility to enroll in a speaking and writing practice course.

4th Semester

[CHEM 201] PHYSICAL CHEMISTRY

Chemical kinetics of heterogeneous catalytic reactions of environmental importance (Environmental Catalysis). Electrochemistry, fuel cells. The knowledge is supplemented by laboratory exercises and Adsorption.

[ENVE 224] GEOGRAPHICAL INFORMATION SYSTEMS
Systematic components of GIS, geographic data, hardware and software for GIS, geographic data collection, organization and storage of geographic data, data models, introduction to databases, data structures, database management systems, processing and analysis of geographic data, evidence of
geographical data and results analysis, applications of GIS (GIS specific environmental issues).

[ENVE 264] SOIL MECHANICS AND FOUNDATIONS

[ENVE 212] WATER POLLUTION AND MONITORING

[ENVE 229] ENVIRONMENTAL THERMODYNAMICS
Introduction to thermodynamics; basic concepts; forms of energy; properties of pure substances; energy balances in open and closed systems (first law); second law of thermodynamics; entropy; Maxwell relations; air and steam thermodynamic cycles; refrigeration cycles; mixtures and phase equilibria; chemical potential, activity and fugacity.

[LANG 202] ENGLISH IV
Students in English IV will be required to study texts and language based on materials related to their field of study. Students are also expected to register and participate in the e-class for the course as well as utilize the recommended or required resources at the Language Centre.

The final mark will be based on the exam at the end of the semester as well as the quizzes in the e-class. Quizzes count for thirty percent (30%) of the final mark.

[LANG 204] GERMAN IV
The objective of the course is to familiarize students with the terminology of the School of Environmental Engineering through scientific and authentic texts of specialized content as well as to improve students’ writing skills. The
framework of thinking; coping and working in a German scientific environment is taught to completion. Special emphasis is given on listening comprehension, as well as speaking and writing skills in order to achieve further fluency in transnational communication.
The e-classroom, the electronic exercises on the Language Centre website along with the audiovisual material of autonomous learning are complementary to the course. Students have even the possibility to enroll in a speaking and writing practice course.

**5th Semester**

**[ENVE 321] STRUCTURAL ANALYSIS & REINFORCED CONCRETE STRUCTURES**

**[ENVE 332] ENVIRONMENTAL METEOROLOGY & AIR QUALITY MODELS**
This course provides general information on the Earth’s atmosphere, which would be of concern to an environmental engineer. The atmospheric chemical composition along with the vertical atmospheric structure are described. The Energy Balance in conjunction with the Greenhouse Effect, as well as the Radiation Balance are examined. Detailed study of Heat Transport and Surface Heat Balance is provided, as well. Particular emphasis is given to the Thermodynamics of the Atmosphere, especially inside the Atmospheric Boundary Layer. Analysis of the equations governing the air masses circulation, particularly inside the boundary layer is presented. Stability of the Atmosphere and the Turbulent Kinetic Energy and prognostic equations for turbulent flow are examined in detail. Topics related to Precipitation, Atmospheric Moisture and Cloud Hydrodynamics/Formation – Classification are developed. A brief presentation of the weather systems takes place, with special focus on Climate Change.

**[ENVE 317] REACTION ENGINEERING (CHEMICAL AND BIOCHEMICAL PROCESSES)**

[ENVE 345] AQUATIC CHEMISTRY
Global Biogeochemical Cycles, Determination of natural water pH, Carbon Equilibrium, chemical species in the solution, regulating tension and neutralization ability, creation of natural waters composition, Law of mass action - Determination of equilibrium constants, chemical activity and ionic strength, 'fate' of metals in the environment, hydrolysis and metals complexation, inorganic compounds as substituents, competitive binding of substituents, interaction of aquatic solutions with sediments and soils, Solubility and Absorption, Effect of chemical species in the solubility, Surface complexes formation, redox geochemistry, Heterogeneous reactions and cycles, redox equilibrium, capacity and redox volumetric measurements (pH scale), Applications of environmental geochemistry.

[ENVE 331] HYDROLOGY
Hydrologic Cycle, Hydrometeorology, Precipitation, Evaporation and Evapotranspiration, Losses, snow hydrology, Infiltration, excess rainfall, hydrological measurements, flood runoff hydrographs, flood redirection, watershed hydrology and watershed models. Applications to computers.

[ENVE 322] HEAT & MASS TRANSFER

Elective Courses

[SSCI 101] SOCIOLOGY
The course is an introduction to Sociology, with analytical and synthetic study of concepts on key elements of social context in which the productive human activity is carried out. Terms such as: society, social issues and roles, social change, social stratification and mobility, social categories and classes, socio-political institutions, socio-economic institutions and transformations are studied.

[SSCI 203] PHILOSOPHY AND HISTORY OF SCIENCE
After an introductory presentation, the course is oriented around two axes. A) Milestones in the history of individual sciences (astronomy, logic, mathematics, physics, etc.) and related philosophies. B) Basic theoretical currents and individual tendencies in philosophy and history of science, from the logical empiricism and later on (study texts of R. Carnap, K. Popper, TS Kuhn, I.

**[SSCI 301] ART AND TECHNOLOGY**

Historical-sociological approach to relationships between Technology and Art, Technology and Culture. Examination of the historical circumstances in which the separation of Art and Technology occurred. Consideration for today’s integration capabilities or harmonious cooperation. Examination of the development of new technologies within the existing socio-economic formation, its impact on art and culture, the needs of “know-how” for optimal control of (new) technologies.

---

**6th Semester**

**[ENVE 340] FIELD STUDIES I**

The Field Studies imply the practical acquaintance of students of topics taught during the courses of the 2nd and 3rd year of the Curriculum. They include environmental applications of Thermodynamics, i.e. Stirling cycles, heliothermic systems and systems of wind energy. Also desertification phenomena, visiting places in Creta where this phenomenon is manifested and studying methods to avoid the problem.

**[ENVE 311] AIR POLLUTION**

Sources and nature of primary air pollutants; Formation of secondary air pollutants; Air pollutant removal mechanisms; Global effects of air pollution (Ozone depletion and greenhouse effect, trans-boundary pollution). Local effects of air pollution (on health and vegetation); Air quality standards and indicators; Emission standards; Basic methods for measuring gas flows in ducts and stacks and monitoring pollutant concentrations in the ambient air and in stacks; Ambient air quality monitoring with stationary and mobile station networks; Laboratory training with monitoring of ambient (TSP, PM10 and PM2.5) concentrations; measurement of gas flow and pollutant concentrations in stacks (SO₂, NO, NO₂, CO, CO₂ and TSP with isokinetic sampling); Calculation of emission factors from measurement results.

**[ENVE 324] UNIT OPERATIONS FOR WATER AND WASTEWATER TREATMENT**

Screening, Flow equalization, Sedimentation, Flotation, Deep bed filtration, Membrane separation processes (Reverse osmosis, nanofiltration, sand bed dewatering). Surface filtration (filterpress, Vacuum filter, drying beds)

**[ENVE 336] NUMERICAL METHODS IN ENVIRONMENTAL ENGINEERING**

Errors, numerical solution of non-linear equations, interpolation and polynomial approximation, numerical differentiation and integration, approximation theory, numerical methods for initial-value and boundary-value problems for ordinary differential equations - Applications in environmental engineering.
**[ENVE 326] HYDRAULICS I**
Open channel flow: Open channel hydraulics, categories and states of flow, analytical methods, basic steady flow equations, specific energy, critical depth and applications, alternate depths. Subcritical and supercritical flows, hydraulic jump analysis, control cross-sections, discharge measurements (Venturi), uniform depth, Chezy and Manning equations, optimal hydraulic cross-section - nonuniform flows, gradually varied flows (BMP), surface profiles, classification and characteristics of flow profiles, BMP calculations – hydraulic jump - gates, spillways. River flow. Three (3) open channel experiments (hydraulic jump, energy losses, flow measurement with triangular and square spillways).

**[ENVE 303] ENERGY AND ENVIRONMENTAL TECHNOLOGIES**

**[ENVE 335] OPTIMIZATION OF ENVIRONMENTAL SYSTEMS**

**[SSCI 104] INTRODUCTION TO PHILOSOPHY**

**[SSCI 102] POLITICAL ECONOMY**
This course includes an analysis of basic concepts and relations of Political Economy, as well as a brief review of recent economic history. It refers more specifically to the theory of value, surplus-value and prices, as well as to the
relation between competition and distribution, to fundamental trends and contradictions of growth, and to the phenomena of economic crisis.

**[SSCI 202] HISTORY OF CIVILIZATION**
Starting with basic knowledge derived from individual branches of social sciences (sociology, anthropology, philosophy, political economy, etc.), students approximates analytical and synthetic concepts and issues relating to the history of civilization in general and certain critical periods (Eastern despotism, Ancient Greece, Western European Medium-Nash, Renaissance, etc.). In the frame of the course critical perspectives of some theories that attempt to interpret contemporary culture (behaviorism, postmodernism, etc.) are examined.

**[SSCI 302] INDUSTRIAL SOCIOLOGY**
The content of the course is the Sociology of Labour and Development, with a central core of the changes in production systems in general and specifically in the manufacturing sector (crafts, industry), in conjunction with relevant branches of the productive and scientific activity. The course examines explicitly-synthetic and in various scales (international, national, local-regional) issues concerning labor relations, production processes, research and development, know-how, industrial policy, inter-sectoral and inter-industrial relationships.

**[ENVE 417] HEALTH AND SAFETY AT WORK**

**INTERNSHIP**

**7th Semester**

**[ENVE 421] APPLICATIONS IN ENVIRONMENTAL MODELING**

**[ENVE 437] CHEMICAL PROCESSES FOR WATER AND WASTEWATER TREATMENT**
Principles of water equilibrium chemistry, Solubility of salts, Chemical precipitation, Coagulation-Flocculation, Adsorption, Ion exchange, Disinfection processes.
**[ENVE 338] MUNICIPAL SOLID WASTE: SYSTEM MANAGEMENT AND DESIGN**

Solid waste classification and characterization, properties and characteristics, principles of integrated solid waste management based on their characteristics, basic stages of solid waste management: collection, transfer, storage, recycling, treatment, final disposal. Available methods of solid waste treatment based on their characteristics (composting, thermal treatment, land filling), advantages and disadvantages, available methods selection criteria. Energy from waste (waste-to-energy) - mass and energy balances. Analysis of solid waste collection systems: temporary storage system, design factors (bins, selection of total bins and garbage trucks capacity), collection and transfer systems (planning routes for the collection, evaluation and selection of garbage trucks, capacity, design parameters, equivalent annual cost of collection and transport, planning examples), municipal solid waste transfer stations (structure and operation of systems, dimensioning, selection criteria and compatibility of technologies, location, annual costs, economic evaluation of garbage trucks and transfer station combination). Methods for the estimation of the required number of Landfill Sites (LS) or Integrated Waste Management Facilities (IWMF) in a study area. Selection criteria of LS locations, location selection among various alternatives. Biological and chemical processes of waste degradation. Quantitative and qualitative characterization of degradation products (leachate, biogas). Design of LS: phases of development and capacities, earthworks and sealing, leachate and biogas collection and management, technical infrastructure (fencing, gates, weight ramp, access roads, etc.), mechanical equipment, organization of operation, supervision and monitoring, final restoration and future monitoring.

**[ENVE 435] PROJECT MANAGEMENT**

**[ENVE 433] HYDRAULICS II**

**Elective Courses**

**[ENVE 443] SUSTAINABLE DEVELOPMENT (ISO14000 & LCA)**

**[ENVE 451] AGRICULTURAL ENGINEERING**

**[ENVE 419] ENGINEERING SEISMOLOGY AND SEISMIC NORMS**

**[ENVE 249] NOISE CONTROL**
Measurement, evaluation, prediction and responses to noise from various sources to the environment. Existing institutional capacity and inadequate control of noise in the country and the country's obligations within the framework of European policy to tackle noise. Topics: Introduction acoustics and noise effects of noise exposure, the recommended noise levels for different areas, measurements and evaluation of noise, environmental, industrial, traffic, aviation, social and workplace noise, earplugs, basic noise law, noise prediction models.
[ENVE 430] FIELD STUDIES II
The Field Studies II has the objective of providing practical acquaintance of students with basic topics taught in the 3rd and 4th year of their curriculum. More specifically, they include exercises related to: The management of air, water and solid wastes and with the operation of relevant collection, recycling, transport, treatment and final disposal installation; Environmental applications of Fluid Dynamics, i.e. Hydraulics, surface and subsurface waters, hydrology, fate of pollutants in surface and subsurface waters, and; The operation of wind energy systems.

[ENVE 432] GROUNDWATER FLOW & CONTAMINANT TRANSPORT
Introduction to porous media, Distribution of Groundwater, Porosity, Hydrogeological formations, Hydraulic head and Hydraulic Gradient Hydraulic conductivity, Darcy’s Law, Homogeneity and Anisotropy, Unconfined aquifers, Confined aquifers, Continuity Equation, Numerical Groundwater Models, Wells, Steady flow towards a well (confined, unconfined and leaking aquifers), Unsteady groundwater flow, Pumping test, Unsaturated zone, Soil properties, Water Budget, Contaminant sources, mass transport processes, Advection and groundwater contamination, Fick’s Law, Molecular diffusion, Diffusion in porous media, Dispersion, applications of 1-D and 2-D flow and mass transport to groundwater contamination problems, Numerical Models of groundwater contamination.

[ENVE 438] TREATMENT AND MANAGEMENT OF TOXIC AND HAZARDOUS WASTES
Definition of toxic and hazardous waste, basic hazardous waste characteristics, classification, labeling, current legal framework, reduction-minimization of waste production at source, reuse and recovery, recycling, recycling efficiency evaluation, storage, use and management of containers, tank management, waste compatibility, transfer, treatment, final disposal, life cycle analysis (LCA), toxic waste landfilling, physicochemical, thermal and biological treatment processes, specific classes of toxic waste, basic concepts of toxicology, acute and chronic toxicity, basic principles of risk analysis, hazard identification, exposure and toxicity assessment, hazard characterization.

[ENVE 442] BIOLOGICAL PROCESSES IN WASTEWATER TREATMENT
Basic operating principles and design of treatment systems: Activated sludge treatment; Aeration and secondary settling tanks; Trickling filters; Aerated lagoons; Stabilization ponds; Sludge treatment (aerobic/anaerobic digestion); Anaerobic processes; Thermochemical and advanced oxidation processes for industrial effluents treatment; Integrated physicochemical and biological treatments.

[ENVE 531] HYDRAULIC WORKS
Water Supply: water needs, design period, pipe network and reservoir design, pipe materials and appurtenances, pump mains, service reservoirs, network analysis, Hardy-Cross method. Sewer network design: combined and separate
sewer systems, stormwater and wastewater design flow rates, return period, I-D-F curves, velocities and slopes, network design and analysis, pipe materials.

**[ENVE 444] RENEWABLE ENERGY SOURCES**

**[ENVE 554] DESIGN OF ENVIRONMENTAL PLANTS AND ENVIRONMENTAL IMPACT ASSESSMENT I**
Theory and methodology for the design of environmental plants. Methodology for the composition of Environmental Impact Assessment (EIA) studies. The students work in teams to accomplish the design study for an environmental plant, based on primary data. The work involves the search/calculation of the design parameters, the design and the cost estimation of the plant, as well as the composition of the relative Environmental Assessment Study. With the completion of the semester, the students have to present the outcome of their study to an open audience.

**Elective Courses**

**[ENVE 446] BIOLOGICAL METHODS OF ENVIRONMENTAL SANITATION**

**[ENVE 450] ANALYSIS OF MUNICIPAL TRANSPORTATION SYSTEMS**
Analysis of traffic conditions within urban transportation systems in order to identify and reduce potential negative environmental impacts. Analysis of urban transportation system: data collection, trip generation, trip distribution, modal split, and traffic assignment. Prediction of future transportation needs. Software tools for the analysis and the investigation of alternative strategies aiming to the reduction of any potentially negative consequences, and the continuous improvement of the environmental conditions within the considered systems.

**[ENVE 434] DECENTRALIZED WASTEWATER TREATMENT SYSTEMS**
Wastewater treatment requirements and receiver water quality limits based on the WHO guidelines and the E.U. directives; Analysis of alternative wastewater reuse and disposal options through the use of models for assessing the irrigation water requirements, the assimilative capacities of rivers and lakes and the size or performance of submarine outfalls. Optimal design and
performance simulation of selected treatment systems, with emphasis on waste stabilization ponds, constructed wetlands with surface and subsurface flows, slow rate land treatment and onsite treatment. Use of an expert system for the analysis of water pollution problems and the synthesis of an optimal dynamic (season-dependent) management schemes through simultaneous consideration of the alternative treatment, reuse for irrigation, and disposal options. Cost estimation of wastewater management projects.

[ENVE 436] WATER RESOURCES MANAGEMENT

[DPEM 433] SMALL & MEDIUM ENTERPRISES (SMES) AND INNOVATION

[ENVE 545] BUILDINGS’ ENERGY EFFICIENCY

[ENVE 411] STRATEGIC MANAGEMENT & INNOVATIVE ENTREPRENEURSHIP

INTERNSHIP
**9th Semester**

**Required Courses**

**[SSCI 304] ENVIRONMENTAL & TECHNICAL LEGISLATION**

**[ENVE 555] DESIGN OF ENVIRONMENTAL PLANTS AND ENVIRONMENTAL IMPACT ASSESSMENT II**

Theory and methodology for the design of environmental plants. Methodology for the composition of Environmental Impact Assessment (EIA) studies. The students work in teams to accomplish the design study for an environmental plant, based on primary data. The work involves the search/calculation of the design parameters, the design and the cost estimation of the plant, as well as the composition of the relative Environmental Assessment Study. With the completion of the semester, the students have to present the outcome of their study to an open audience.
Elective Courses

[ENVE 501] FUNDAMENTAL PRINCIPLES OF AEROSOL SCIENCE

[ENVE 537] INDOOR AIR QUALITY

[ENVE 535] COASTAL ENGINEERING

[ENVE 541] RISK ANALYSIS

[ENVE 539] SOIL & GROUNDWATER REMEDIATION TECHNOLOGIES
Transport and fate of contaminants in the soil. Hydrodynamic (vection, dispersion, diffusion), abiotic (adsorption, evaporation, ion exchange, hydrolysis, etc) and biotic processes that take place in the underground. Soil remediation technologies (physicochemical, biological and thermal methods) - basic characteristics, systems design, performance and suitability, advantages and disadvantages. Remediation technologies of contaminated aquifers (in-situ, ex-situ and on-site technologies) - basic characteristics, systems design, performance and suitability, advantages and disadvantages. Examples of applications.
[ENVE 553] AGRO-INDUSTRIAL WASTE PROCESS TECHNOLOGIES
Introduction to agro-industrial waste, basic concepts and issues (definitions, properties, pollution load of agro-chemicals activities, gaseous, solid and liquid waste). Organization and environment (inputs, outputs, life cycle analysis, ISO Standards). Hygiene designing in food processing (requirements, HACCP principles, general designing principles, equipment specifications, cleaning and disinfection, energy cleaning, CIP design). Food Industry, environment and recovery (waste production stages in the supply chain, functional components for recovery purposes, recovery steps, conventional technologies, emerging non-thermal technologies, comparison of conventional and emerging technologies in terms of energy efficiency and cost). The “Universal Recovery Strategy” (macroscopic pretreatment, macro- and micro-molecules separation, extraction, isolation and purification, product formation). Commercial applications of recovered components from food waste (commercialization stages, legal issues, implementation problems of innovations, scale up, marketing, real products). Separation of functional macromolecules and micromolecules using ultrafiltration and nanofiltration. Agriculture and environment (agrochemicals, insecticides, classification and mechanism of action, fungicides, herbicides and their classification, fertilizers, gaseous, solid and liquid pollutants, pesticides residues in food and health effects, the Venom Circle, farming, control and distribution of organic products). Agriculture and energy management (energy greenhouses needs, heat pumps, combined heat and power systems and electricity, recycling heat from industries, use of solar energy for heating, use of geothermal energy, solid biomass and biogas to heat the greenhouse, anaerobic treatment, Biodiesel production, generation of pellets from oil-pruning and other agricultural residues). Waste treatment (pretreatment, primary treatment, secondary treatment, aerobic treatment, anaerobic treatment, activated sludge treatment, tertiary treatment, composting, biochar production). Livestock & environment unit (choice of waste treatment system, septic precipitation tank, neutralization unit of gases, wetland feeding well). Management of treated wastewater (biological treatment, surface flow wetland, vegetation species in wetlands, optimal wastewater treatment, chlorination system, performance of artificial wetland, water reuse, control of environmental impacts).

[ENVE 511] DESIGN OF ENERGY SYSTEMS

[ENVE 452] GAS-EMISSIONS TREATMENT TECHNOLOGY
Atmospheric pollution from anthropogenic emissions; an introduction. The pollutants and their origin. Their behavior and changes into the atmosphere. Global scale pollution influences. National and international laws and
registrations in respect to emissions. Gas emissions control technologies: mobile sources (automotive pollution control, etc). Gas emissions control technologies: stationary sources (industry emissions control, etc). Particulate matter pollution and its control. Novel, alternative clean technologies for energy and chemicals production

**10th Semester**

No courses are offered during the 10th Semester due to the students’ obligation to complete their diploma thesis.
The Association was established by decision No.787/04-02-2003 of the Athens Court of First Instance with registration number 24493, as a scientific Association, collective body of Greek Environmental Engineers, under the name: Hellenic Association of Environmental Engineering (PA.S.D.MH.P.), based in Athens with nationwide organization.

Aims of the Association as indicated in Article 2 of its statute are:

- To promote in every scientific way the view that the "Environment" cannot be seen as another specialized engineering skill, but requires a completely different approach, different starting points for reflection, fully addressing in a systematic and multidisciplinary way the issue of constitutionally protected Sustainable Development where other engineering disciplines are involved in a specific, predetermined role to the extent deemed necessary.

- To advance, protect and promote the science of Environmental Engineering related to the management and protection of the natural and man-made environment.

- To contribute substantially to strengthening and raising the sense of social solidarity and responsibility towards the environment and to developing methods and techniques for the protection of the environment, the improvement of the quality of life and the protection of public health.

- To improve working conditions for Environmental Engineers, protect the reputation of the profession, promote its social role and safeguard professional rights and activities.

- To promote all forms of cooperation among its members for the advancement of the science of Environmental Engineering towards Sustainable Development.

- To contribute to the design and implementation of any kind of national techno-economic development programs.
